New, Paid, Full-time Research Opportunities in Business and Economics

Each year, many top U.S. universities and research institutions hire several hundred paid full-time research assistants (RAs). This is a new trend in business and economics in which faculty employ RAs for about two years to receive help with their research, before the RAs go on to careers in academia or industry.

These job opportunities allow RAs to learn what research is all about by working alongside the country’s top researchers. You will not only experience the passion for research these faculty inspire, but also gain skills that will serve you well in any future career you choose, whether in academia or in the private sector.
